

1. Authentication Theme & Layout

Suggestion: Use the same background color for Log In and Sign Up screens, and arrange fields in order: Name → Email → Password. Make the Sign Up button brighter.

Benefit: App looks consistent and professional, and users won't get confused.

2. Marketplace Card Design

Suggestion: Add "View Details" text or arrow icon near price, and show placeholder image if coin image fails to load.

Benefit: Users clearly understand cards are clickable and UI stays clean even if images fail.
